

Outsmart AI phishing threats

AI is fueling more effective phishing attacks. Even with security training, email filtering, and blocklists, employees are still getting phished.

But with Dashlane Omnix™, every employee gets last-mile protection: Our AI phishing alerts notify employees about phishing risks the moment they visit a suspicious website, and admins get access to phishing threat insights.

54%

The average click-through rate
for AI-crafted phishing emails*

AI phishing alerts provide enterprises with:

Complete protection

Go beyond the boundaries of a traditional vault with active, browser-based phishing defense for every login, even for employees who aren't using a Dashlane vault.

Phishing resistance

Leverage our proprietary AI model to identify and prevent threats at the moment of engagement in the browser, closing the final gap in the phishing attack lifecycle.

Actionable insights

Get in-depth insights into organization-wide phishing activity to prioritize mitigation based on the most at-risk employees and domains.

“One of our biggest concerns
is phishing emails.”

Ben Leibert, Technical Manager at VillageReach
