

CREDENTIAL PROTECTION

Uncover risks. Combat threats.

Credential theft surged by **160% in 2025**.¹ To stay protected, organizations need to understand where their credential risks are and act fast—before they become active threats.

Credential Protection, available on the Dashlane Omnix™ platform, pairs always-on credential intelligence with targeted actions to protect against the #1 breach threat: risky employee credentials.

\$4.44
million

is the average cost
of a data breach²

With Credential Protection, you can:

Identify risks

Credential Risk Detection provides admins with insights on every at-risk credential, even if employees aren't using Dashlane. In a single month, one organization reduced compromised credentials by 75%.

Automate risk response

Credential Risk Alerts & Notifications prompt employees in their browser and in Slack to update risky passwords. They provide “the right level of guidance without creating friction,” shares one admin.

Outsmart phishing attacks

AI Phishing Alerts detect phishing risks in under half a second using a proprietary AI model. Employees receive an in-context alert the moment they visit a suspicious site—even if they aren't logged in to Dashlane.

Stop playing detective. Start taking action.
